This is the simple create label example in which we create an StringItem to display the "Userld" as a label text.

J2ME Label Example

[<--Prior](#) | [Index](#) | [Next-->](#)

This is the simple create label example in which we create an StringItem to display the "Userld" as a label text. In the given application we are using setLabel to set the new label to the

ItemString. We are replacing the new label on the place of previous label and setText on the position on the previous text. The complete source code is given below and the screenshot of the application given below for easy to understand.

- item.setLabel("E-MAIL ID: ");
- item.setText("sandeep15284@rediffmail.com");
- form.removeCommand(next);

The Application is as follows:

I Make **\$260 Every Day!**

work from home
and make \$7,397
a Month

See How...

A woman with dark hair, wearing a white shirt, is sitting at a desk and working on a laptop. The background is slightly blurred, showing an office or home workspace.A close-up image of a man's head, showing significant hair loss on the top of his head. The hair is dark and appears to be thinning or falling out in patches.
