J2ME Hello World Example

[<-Prior](#) [Index](#) [Next->](#)

This is the simple hello world application.

In this example we are creating a form name "Hello World" and creating a string message "Hello World!!!!!!!" as below:

Form

```
form = new Form("Hello World");
```

```
String msg = "Hello World!!!!!!!"
```

In this application, To display the message we are using append method with the form as below:

```
form.append(msg);
```

The Application is as follows:

HelloWorld.java

```
import javax.microedition.lcdui.*;
import javax.microedition.midlet.*;

public class HelloWorld extends MIDlet{
    private Form form;
    private Display display;

    public HelloWorld(){
        super();
    }

    public void startApp(){
        form = new Form("Hello World");
        String msg = "Hello World!!!!!!";
        form.append(msg);
        display = Display.getDisplay(this);
        display.setCurrent(form);
    }

    public void pauseApp(){}

    public void destroyApp(boolean unconditional){
        notifyDestroyed();
    }
}
```

Suggestion

It could be better if you give a little explanation about the methods in these codes and what they do for novice programmers like me because I can't really get what is happening in these codes as they are

Notes

First of all, thank you for providing a basic Java Micro Edition 'hello world' app. Even though the code is not explained line by line, one can get the idea. I found that using Eclipse, I could not just cut and paste the source, that would give errors. Rather, I generated the structure code automatically and filled the example code line by line. For some reason, that worked and it also helped me learn about what I think is going on with the code. Thanks again and greetings from the USA!
